

# FineAnnotator

Requirements analysis and specifications are essential before building the product. The software we are planning to develop is aimed at three sorts of users: researchers, annotators, and administrators. So we learned about the needs of the stakeholders and prospective consumers through interviews. We sorted their demands into categories and set priorities to ensure that the most critical ones didn't go overlooked after they were all listed. Their disagreements were likewise settled by us. The following are the criteria that the product's users have expressed to us.

## ➤ Requirements of Hirers:

1. Post image with recruitment details.
2. Post description of annotation work they want to be done.
3. Select qualification they want in annotators.
4. Look at profiles of applicants.
5. Find the option to select amount for the annotation per data or per hour.
6. Choose the number of annotators they want.

## ➤ Requirements of Job Seekers :

1. Search for jobs according to different criteria like payment, work hours, deadline etc.
2. Apply for jobs that are listed.
3. Build their profile with CV and other details.
4. Receive rating and recommendations from the company .
5. Ask for more clarification about the job.
6. Contact number is hidden unless they want to share .
7. Payment will be given via this platform after completing the work .

## ➤ Requirements of Admins :

1. Block and delete account they see as a scam.
2. Fix any payment related issues between companies and annotators.
3. Anyone can file a complaint about any issue to the admins.
